Problems to Week 9 Tutorial — MACM 101 (Spring 2025)

1. Prove each of the following for all $n \ge 1$ using the principle of mathematical induction.

(a)

$$1^{2} + 3^{2} + 5^{2} + \ldots + (2n-1)^{2} = \frac{n(2n-1)(2n+1)}{3}$$

(b)
 $\sum_{i=1}^{n} \frac{1}{i(i+1)} = \frac{n}{n+1}$
(c)
 $\sum_{i=1}^{n} i(i!) = (n+1)! - 1$

2. (Only for those familiar with complex numbers) Prove DeMoivre's theorem

$$(\cos\theta + i\sin\theta)^n = \cos(n\theta) + i\sin(n\theta).$$

- 3. Prove that for all natural numbers n if n > 3 then $2^n < n!$.
- 4. A jigsaw puzzle is put together by successively joining pieces that fit together into blocks. A move is made each time a piece is added to a block, or when two blocks are joined. Use strong induction to prove that no matter how the moves are carried out, exactly n-1 moves are required to assemble a puzzle with n pieces.
- 5. Let P(n) be the statement that a postage of n cents can be formed using just 3-cent stamps and 5-cent stamps.
 - (a) Show that the statements P(8), P(9), and P(10) are true, completing the basis step of the proof.
 - (b) What is inductive hypothesis of the proof?
 - (c) What do you need to prove in the inductive step?
 - (d) Complete the inductive step for $k \ge 10$.
